$$\begin{cases} \frac{m-1}{2} + \lambda = \left(\frac{a-1}{2} + \lambda\right) \frac{m}{\alpha} \\ \frac{n-1}{2} + \beta = \left(\frac{b-1}{2} + \beta\right) \frac{n}{b} \end{cases}$$

$$20$$

$$d(\frac{n-m}{a}) = \frac{am-m}{2a} - \frac{am-n}{2a}$$

$$d(\frac{a-m}{a}) = \frac{a-m}{2a}$$

$$d = \frac{a-m}{2a}$$

有對
$$\chi + 0.5 = (2+0.5) \frac{m}{a}$$
 框刻.
 $\chi + 0.5 = (3+0.5) \frac{n}{b}$
